

Health & Safety

Employee Handbook

Yorkhill Housing Association

This document forms part of the organisation's Health & Safety Management System and should be read in accordance with the organisation's Health & Safety Control Manual, which sets out the policies and procedures in full.

CONTENTS

Section 1 – Policy and Organisation

- 1.1 Your Health & Safety Responsibilities
- 1.2 Health & Safety Policy Statement
- 1.3 Health & Safety Control Manual
- 1.4 Health & Safety Committee
- 1.5 Health & Safety Representatives
- 1.6 Information, Instruction and Training

Section 2 – Buildings

- 2.1 Fire Safety
- 2.2 Electrical Safety
- 2.3 Slips, Trips and Falls
- 2.4 Environment
- 2.5 Letter Bombs
- 2.6 Gas Safety
- 2.7 Terrorist Attacks

Section 3 – People

- 3.1 First Aid
- 3.2 Accident/Near Miss Reporting
- 3.3 Risk Assessments
- 3.4 Staff Safety and Violence
- 3.5 Control of Substances Hazardous to Health – COSHH
- 3.6 Noise
- 3.7 Display Screen Equipment – DSE
- 3.8 Vehicles
- 3.9 Smoking
- 3.10 Alcohol and Drugs
- 3.11 Blood, Body Fluids and Sharps
- 3.12 New and Expectant Mothers – NME
- 3.13 Stress
- 3.14 Young Persons
- 3.15 Electromagnetic Radiation
- 3.16 Food Hygiene
- 3.17 Occupational Health
- 3.18 Homeworking
- 3.19 Lone-working
- 3.20 Adverse Weather

Section 4 – Work Carried Out By Employees

- 4.1 Manual Handling
- 4.2 Work at Height
- 4.3 Personal Protective Equipment – PPE
- 4.4 Asbestos

Section 5 – Work Carried Out By External Contractors

- 5.1 Selection and Use of Contractors

Section 1 – Policy and Organisation

1.1 Your Health & Safety Responsibilities

In the UK in 2021/12, 123 people were killed at work, 65,000 injuries occurred at work and 36.8 million days lost due to workplace injuries or ill health. Taking health, safety and wellbeing seriously is important to you and everyone around you.

Every person within our organisation has a responsibility to ensure their own safety and that of others. All employees can be held liable for negligence or omissions resulting in harm to anyone. Employees must report immediately to their Line Manager or the Chief Executive any breaches of Health & Safety procedures, any accidents and incidents and any unsafe acts. Horseplay or practical jokes that could result in harm to themselves or others will not be tolerated.

Managers and supervisors have additional responsibility for good health and safety practice and must ensure all reasonable precautions are taken to allow staff in their team to work in a safe manner while actively monitoring and checking safety procedures are implemented (the Health & Safety Control Manual (HSCM) sets out these duties in detail).

The Health & Safety Administrator (HSA) is responsible for the administration of the Health & Safety arrangements and is available to deal with general Health & Safety related queries. Our HSA is Aileen Brown

1.2 Health & Safety Policy Statement

The Management Committee and Senior Management do not want any staff, visitors, contractors or people we work with to be injured, hurt or become ill as a result of any of our activities. As a result we have formally committed ourselves to providing a safe working environment and to ensure that we manage and control work related hazards and risks. The Health & Safety Policy Statement has been prepared and endorsed by the Management Committee and is displayed on the notice board.

1.3 Health & Safety Control Manual (HSCM)

Yorkhill Housing Association's Health and Safety Control Manual specific policies, procedures and arrangements for all health and safety related issues for all staff in our employment. The manual is regularly updated as legislation changes and ideas on good practice develop. You can view the manual at any time; it is stored on the central drive in the Health and Safety folder. Whilst we encourage you to familiarise yourself with the contents of the Health and Safety Control Manual, this Handbook provides a short summary and you will receive relevant training on the key aspects of the manual that affect you.

1.4 Health & Safety Committee

Our Governance and Finance Sub-Committee will monitor Health and Safety issues and it will be an agenda item at each meeting.

DO

- Raise any Health & Safety issues that you would like the Governance and Finance Sub-Committee to discuss with the H&S Administrator prior to their meeting for it to be included on the agenda.

DON'T

- Think that the Governance and Finance Sub-Committee is a 'talking shop'; instead keep up-to-date with their discussions and decisions

1.5 Health & Safety Representatives

Where Trade Unions have the right to appoint Safety Representatives, the Trade Unions will provide training. The Representatives have specific duties and functions.

DO

- Involve them in the Governance and Finance Sub-Committee if possible.
- Keep them involved and informed of any H&S developments.

DON'T

- Treat them as something outside of the normal H&S arrangements.

1.6 Information, Instruction & Training

You will be provided with training in H&S related matters, including induction, change of job, emergency procedures and training in specific topics relating to the nature of the work being carried out. Documented, confidential training plans will be maintained.

DO

- Ensure that you are aware of the training requirements for your job.
- Ensure that you have received training before you undertake a task requiring specific training.
- Familiarise yourself with the content of the HSE Health & Safety Law poster that is prominently displayed on the notice board.

DON'T

- Attempt to undertake an activity if you have not been adequately trained to do.

Section 2 – Buildings

2.1 Fire Safety

Workplace fires can result in people suffering the effects of smoke and burns and in some cases, can be fatal. Being familiar with all of our checks and controls to prevent a fire is essential.

We have fire detection systems, fire extinguishers and fire notices on display in prominent locations throughout the premises, including at each fire alarm call point, to notify everyone what to do in the event of an emergency. These notices include the location of the Assembly Point, which is at 63 Lyburn Street

The Health and Safety Controller is: Stewart Pattison

The Depute Health and Safety Controller is: Gary Watson

A Fire Risk Assessment has been carried out for the premises and the H&S Administrator will inform you of any significant findings or precautions to be taken. Equally, you should inform the H&S Administrator or your Line Manager as soon as possible of any concerns regarding fire safety.

Procedures are in place for periodic inspection and testing of the fire alarm system, emergency lighting and fire extinguishers.

DO

- Familiarise yourself with the location of the Assembly Point and the procedures which must be followed in the event of a fire.
- Sign out if you are leaving the building at any time.
- **On discovering a fire** – raise the alarm using the nearest Fire Alarm call point.
- If you have been trained and you feel safe to do so – tackle the fire with the correct class of extinguisher.
- Leave the building and proceed to Assembly Point.
- Dial 999 as soon as possible, even if you think someone else may have done so.
- Inform the H&S Administrator or senior member of staff of the location of the fire on leaving the premises or at the Assemble Point.
- **On hearing the fire alarm**
- Close windows and doors if this does not significantly delay departure. Fire doors must be closed.
- Evacuate the building by the nearest available exit and proceed to the Assembly Point, do not delay to pick up personal belongings.
- Ensure visitors you are responsible for are escorted out of the building with you.
- If necessary seek assistance from colleagues to evacuate disabled colleagues or visitors without putting your own safety at risk.

DON'T

- Use lifts during an emergency evacuation.
- Attempt to tackle a fire if you have not been trained in the correct use of fire equipment, do not feel comfortable to do so or the fire is bigger than a waste paper bin.
- Delay departure by taking coats or personal belongings.
- Re-enter the building under any circumstances until it is safe and you are told to do so by the Emergency Controller (or Depute), or senior member of staff.

2.2 Electrical Safety

The main risk associated with electricity is fire, electric shock and electrocution.

All electrical equipment (both fixed and portable) in this organisation is subject to a formal documented inspection and maintenance programme by a competent person.

DO

- Inform the H&S Administrator before bringing any electrical equipment onto any of our premises or using in company vehicles. The H&S Administrator will log any equipment and if necessary, arrange testing by a competent person prior to its use.
- Visually inspect electrical equipment prior to use for signs of cable damage, loose plugs, cracked casings and trailing cables and, if no defects are obvious, maintain vigilance during use for sparks etc.
- Only use equipment for its correct purpose.
- Report faulty equipment immediately to the H&S Administrator who will take the item out of service for repair/replacement.

DON'T

- Use damaged or defective items.
- Use electrical equipment which has failed electrical testing.
- Attempt electrical repairs, irrespective of how trivial the repair may seem.
- Overload electrical sockets/adaptors etc.
- Tamper with any electrical items including removing, transferring or marking labels.

2.3 Slips, Trips and Falls

Slips, trips and falls are the leading cause of work related accidents (31%). The majority of slip trips and falls result in broken bones and cause 15% of all accidental deaths. Some of the most frequently overlooked general requirements involve housekeeping and the guarding of floor and wall openings.

DO

- Keep aisles and passageways clear and free from obstructions.
- Report any faulty or inadequate floor coverings or railings.
- Store materials properly.
- Route cabling safely.
- Return equipment to storage area when no longer in use.
- Ensure lighting is adequate.
- Speak to the H&S Administrator or your Line Manager should you have any queries regarding housekeeping.

DON'T

- Leave cables, hoses or equipment where someone may trip over them.
- Run or rush.
- Leave the problem to someone else.
- Block fire exits or emergency routes.
- Allow any waste materials to accumulate.

2.4 Environment

Everyone can make a contribution to reduce our impact on the environment. We can reduce the amount of waste we produce and the impact of any pollution by changing the way we do things to reduce, reuse and recover to recycle.

This can only be achieved through total cooperation between all employees. In general, pollution occurs through: spills and discharges; air emissions; waste; land contamination and nuisance (dust/noise).

DO

- Separate waste materials and use the appropriate containers.
- Minimise waste production.
- Report all water and compressed air leaks.
- Switch off lights and any equipment when not in use.
- Store chemicals and oils away from surface water drains.
- Report any spills immediately.
- Know the location of the nearest available spill kit.
- Print on both sides of paper (can save an average company £4,000 a year)
- Print in black and white whenever possible.

DON'T

- Pour anything down the drain (one litre of oil pollutes one million litres of drinking water).
 - Put liquid waste into skips.
 - Mix special waste with general waste.
 - Leave lids off solvents or paints.
- Store chemicals on unmade ground or in areas other than designated storage.

2.5 Letter Bombs

The risk associated with letter bombs is considered to be extremely low; you should however, be vigilant and raise the alarm should you suspect that a letter or package may contain an explosive device.

Some warning signs to look out for are:

- grease marks on the envelope or wrapping
- an unusual odour such as marzipan or machine oil
- visible wiring or tin foil, especially if the envelope or package is damaged
- envelope or package may feel very heavy for its size
- weight distribution may be uneven
- contents may be rigid in a flexible envelope
- be delivered by hand from an unknown source or posted from an unusual place
- package may have excessive wrapping
- there may be poor handwriting, spelling or typing or wrongly addressed
- may be too many stamps for the weight of the package

DO

- Leave the area then immediately call 999 and inform the police.
- Advise senior management without delay.
- If it is suspected that the package may be biologically contaminated, it must be kept separated from staff and be available for medical examination.

- Request a shutdown of any ventilation systems, if controlled centrally.

DON'T

- Touch the package.
- Use mobile phones.
- Switch on or off any electrical equipment.

2.6 Gas Safety

There are procedures in place to ensure that all gas appliances, flues and installation pipework are inspected for safety within each 12 month period by a Gas Safe Registered contractor and that a structured inspection and maintenance programme is implemented.

In the event of a suspected gas leak (including natural or carbon monoxide):-

DO

- Close the Emergency Control Valve as soon as practicable. The emergency control valve is located at inside the wall cupboard next to the kitchen window.
- Call the following number immediately if the smell of gas is still apparent or if the leak is suspected to continue – Gas Emergency Freephone Number: 0800 111 999
- Evacuate the building as per the Fire Evacuation Procedures (Section 2.1)

DON'T

- Switch on or off any electrical equipment.

2.7 Terrorist Attacks

If a terrorist attack or suspected terrorist attack occurs, the police shall be informed immediately (notwithstanding the need to evacuate).

DO

- Report any concerns to your Line Manager immediately.
- Stay safe – stay indoors and lock all access points unless the building you are in is under direct attack

DON'T

- Attempt to engage any terrorist attacker under any circumstances.
- Put yourself or those around you in harms' way.

Section 3 – People

3.1 First Aid

We have three fully qualified first aiders and two fully qualified mental health first aiders, these are:

First Aider:	Grant Kennedy
First Aider:	Catriona MacKenzie
First Aider:	Aileen Brown
Mental Health First Aider:	Stewart Pattison

The first aid box is located above the shredding cabinet in the kitchen area and signage is in place.

If there is an accident or incident that requires attention, you should immediately contact the first aider. For serious accidents requiring medical attention do not wait for a first aider, contact the emergency services by dialling 999.

For 'out of office' work, all staff will be provided with a mobile telephone with which to raise the alarm for help if required. The first aider or H&S Administrator should be notified as soon as is reasonably practicable of an incident taking place out of the office that required any form of first aid attention.

The first aider, or H&S Administrator (whoever was dealing with the incident) will record the incident details in the Accident Book. The H&S Administrator will investigate and report all accident, incidents and dangerous occurrences to the Chief Executive.

DO

- Familiarise yourself with the names/location of first aiders and first aid kits in your area.
- Report any accident, near miss, injury or illness and obtain treatment immediately if required.

DON'T

- Administer first aid if you are not qualified – seek help instead.
- Move an injured or seriously ill person unless to prevent further injury.

3.2 Accident/Near Miss Reporting

Accidents and near misses must be reported to find out what happened, to prevent recurrence and to comply with the law. As a rule of thumb, for every three near misses there is an accident and for every six there is a serious accident, so please report them and we can sort the problem now.

DO

- Report all accidents and near misses you witness or are involved in, no matter how minor you consider them to be. This will enable them to be investigated and actions taken to reduce the risk of a recurrence.
- Seek first aid treatment as soon as possible if you sustain an injury.
- Inform your Line Manager if you have an injury at work.

DON'T

- Move anything at the scene of an accident, unless the main purpose of doing this is to secure the safety of the area or reduce risk to other people.

3.3 Risk Assessments

A programme of Risk Assessments is in place, which includes a General Risk Assessment for the principal activities carried out, individual assessments for employees in certain categories (e.g. new and expectant mothers) and specific assessment as required by legislation (e.g. fire, hazardous substances, display screen equipment, noise, asbestos, display screen, manual handling).

You will be made aware of the findings of risk assessments relevant to your work and provided with training where necessary to enable you to carry out risk assessments.

DO

- Know where to obtain copies of relevant risk assessments.
- Ensure a risk assessment has been carried out for the task prior to the work commencing.
- Ensure you are aware of the risk assessment findings and the appropriate control measures in place.
- Ensure any additional actions/controls are in place before commencing the task.

DON'T

- Undertake a task prior to an assessment being completed, if required.
- Undertake a task unless all control measures are followed.

3.4 Staff Safety and Violence

Violence is not limited to physical attack, it can also include verbal abuse, threats, ostracism, discrimination, and racial or sexual harassment. Yorkhill H.A's business involves a lot of contact with the public which could increase the likelihood of such attacks. All staff are asked to raise any concerns and discuss precautions with colleagues and managers/supervisors. An incident log book is provided and located beside the accident log book in the kitchen area. The log will be an agenda item for every Senior Staff meeting.

DO

- Report all incidents of violent or aggressive behaviour to your Line Manager or Chief Executive to allow senior management to fully investigate (confidentiality will be respected).
- Contact your Line Manager
- If you feel you need independent confidential support following any incident you can call Crisis Counselling direct on 0141 812 8474 or email them at info@crisiscounselling.co.uk.
- Raise any concerns about the risk of violence.
- Discuss work place precautions with colleagues and managers.

DON'T

- Fail to report any incidents – only by recording and investigating a complaint can the organisation reduce the risk of it happening again.

3.5 Control of Substances Hazardous to Health (COSHH)

An assessment has been carried out to identify risks posed by hazardous substances used by staff. This is referred to as a COSHH Assessment.

Hazardous substances can be gases, powders, liquids, dust or solids that can cause damage when they enter the body by mouth or through cuts in the skin; are breathed in; or come into contact with the skin or eyes. Hazardous substances can be used safely provided appropriate precautions are taken.

Should you be likely to be exposed to hazardous substances, you will be informed of the hazards and risks to health, the findings of the assessment and the correct use of any control measures or good working practices.

DO

- Consult the risk assessment prior to use and ensure all controls are in place.
- Read warning labels on packaging and containers.
- Wear all appropriate protective equipment provided and ventilate where appropriate.
- Contact the H&S Administrator if you have to use chemicals or be exposed to possible hazardous substances that are not routine to allow a suitable assessment to be carried out.
- Seek medical advice if you begin to feel unwell or suffer any ill effects whilst using substances.
- Always store, handle and dispose of substances correctly.
- Use any skin care products that are supplied.
- Remember to wash your hands after using hazardous substances.
- Report any damaged containers.

DON'T

- Eat, drink or smoke when using hazardous substances.
- Carry out a task involving hazardous substances without a COSHH Assessment being in place.
- Decant materials into wrongly labelled containers, especially ones that once contained food and drink.

3.6 Noise

Excessive noise (sound pressure) levels can be a major health hazard and if uncontrolled can permanently damage your hearing. Hearing damage depends on the intensity, frequency and duration of noise exposure. The greater the noise level and/or duration...the greater the risk.

Any new equipment/machinery to be used by staff will be considered to establish what noise levels are likely to be produced – manufacturers will supply this information. Equipment with reduced noise levels will be selected where reasonably practicable.

If an occasion arises where you are required to work in a 'noisy' environment:

DO

- Contact the H&S Administrator who will arrange for a detailed noise risk assessment to be carried out.
- Follow guidance given in the noise risk assessment.
- Where provided, wear ear protection.
- Keep noise exposure to a minimum.

DON'T

- Alter hearing protection.
- Insert ear plugs with dirty hands.
- Work in a place where you cannot carry out a normal conversation at a distance of two metres.

3.7 Display Screen Equipment (DSE)

Regular use of DSE without assessment can lead to a number of ill health effects such as musculoskeletal discomfort, eye strain, neck pain, back pain and fatigue. If you regularly use DSE for continuous periods in excess of one hour, you are considered a 'DSE user' and require a specific DSE risk assessment. Your workstation will be examined using an ergonomic approach to office furniture, equipment, design and layout and the immediate work environment. Control measures identified during the risk assessment (e.g. seating position, wrist rests) will be provided and you will be trained in their correct use.

There is no evidence linking DSE with eye/eyesight damage or deterioration however, users are entitled but, not required, to undergo appropriate eye/eyesight tests at the organisation's expense. Where spectacles are prescribed specifically for work with DSE, you will be provided with the cost of a basic frame and suitable lens/spectacle allowance detailed in the EVH Salary Scales and Allowances sheet.

In Scotland,

- If you are a UK resident, you can get a free NHS eye examination.
- This is not just to test your sight – it's a thorough examination to:
 - check the health of your eyes
 - find any eye problems before they become more serious
 - look for signs of other health problems.

DO

- Ensure your workstation (both your office and home set up, if relevant) has been assessed and any required remedial controls are in place.
- Ensure that you have been given awareness training in setting up your workstation.
- Adjust your workstation so it is comfortable for you.
- Report any eye or musculoskeletal symptoms to your Line Manager.
- Take frequent breaks to do tasks that do not involve screen work.
- Be aware of the early symptoms of upper limb disorders, such as tingling in the fingers and report them to your Line Manager

DON'T

- Work with DSE for longer than 50 minutes in any one hour period. Breaks away from DSE cannot be added together to give longer breaks (a break in this context does not mean a break from work, simply a break from screen use).

DSE Set Up Tips:

- Top of monitor should be just below eye level, use screen height adjuster if too low.
- Position monitor straight in front of you to avoid twisting, keep it clean and avoid any glare.
- Adjust the back/seat of your chair to support your spine and keep it aligned.
- Adjust height of chair so that your forearms are level with or just above keyboard, wrists flat.
- If your feet are not flat on the floor, try using a foot rest. Make sure you have enough leg room.
- Avoid using computer continuously – change activity and posture regularly.
- Document holders are useful when copy-typing to reduce eye movement.
- Don't hold phone with your shoulder, move it to other side to free your writing hand.
- Stretch regularly to prevent muscle tension.

3.8 Vehicles

Whether a car, van or bicycle, assess all risks and make decisions based on them. More than a quarter of all road traffic accidents involve someone driving for work purposes. Before setting out on a journey consider your own safety: review the length of journey, weather conditions, possible delays, etc. Don't just start the journey, think about your safety first.

Our General Risk Assessment makes specific requirements for those driving on company business as your vehicle is considered an extension of the workplace. Most comprehensive insurance policies can have business use added for no additional charge – check with your insurance provider.

DO

- Follow good driving practices in accordance with the Highway Code.
- Report any accidents/incidents to senior staff who will investigate and record in the Accident Book.
- When using your own vehicle for work purposes, you must submit a 'Vehicle Declaration Form' annually (or whenever there is a change to your circumstances such as a change of vehicle or address) to the H&S Administrator confirming your licence status, valid business insurance, road tax and MOT are in order.
- When using a company vehicle you must provide access on an annual basis to your Line Manager via www.gov.uk/view-driving-licence.
- Discuss any driving concerns with your Line Manager prior to starting any journey.

DON'T

- Attempt to drive when feeling tired, unwell or under the influence of alcohol or drugs.
- Drive for more than six hours in a day unless agreed by your Line Manager to a maximum of ten hours in one day.
- Eat, drink, smoke, use a mobile phone or other hand-held device while driving (even via a hands-free kit).
- Forget to tell the H&S Administrator without delay if any relevant changes occur to your licence or documentation during the year.
- Attempt to deal with anything you have not been trained for in the event of an accident or emergency situation.

- Drive without valid insurance, including for business use if you are using your own vehicle in the course of your work.

3.9 Smoking

It is commonly known that smoking can cause lung cancer, it also causes many other cancers and illnesses. If you are a smoker, Yorkhill H.A. is keen to help you stop.

Smoking is not permitted in any work premises which are wholly or substantially enclosed, i.e. ceilings or walls on more than 50% of perimeter. You are entitled to a smoke free environment in which to continue your work. Where this is not available, you will be entitled to cease work within the area. In such circumstances, you should report the situation to your Line Manager immediately, who will discuss and agree the right course of action.

DO

- Contact your Line Manager for details of how we could assist if you wish to give up smoking – we wish to encourage our staff to be non-smokers.

DON'T

- Smoke in any company owned or public buildings.
- Smoke in any vehicle owned, leased or hired by the organisation or your own vehicle whilst driving on company business.

3.10 Alcohol and Substance Misuse

Yorkhill Housing Association has a policy on alcohol and substance misuse in the workplace to protect the health and welfare of all employees. Its aim is to prevent and eliminate, where possible, the potential for ill health, accidents, absence and poor performance. If you have an alcohol or substance related problem, you are encouraged to seek help and treatment voluntarily by contacting your Line Manager who will be able to arrange an assessment and if necessary treatment.

Free counselling and support is also available from Crisis Counselling. This can be arranged for you or you can contact them yourself on 0141 812 8474 or email them at info@crisiscounselling.co.uk

DO

- Discuss any alcohol or substance related concerns with your Line Manager or senior member of staff as a first step.
- Find out about alcohol and substances and the social, health and employment effects.
- Urge colleagues to seek help if they have problems arising from alcohol or substance misuse.

DON'T

- Attend work if under the influence of alcohol and/or substance(s) which may impair your judgement or impinge on your own or other's health, safety and wellbeing.
- Cover up or collude with colleagues suffering from alcohol/substance misuse.

3.11 Blood, Body Fluids & Sharps

Yorkhill Housing Association recognises that staff may potentially be put at risk through exposure to contaminated blood, body fluids or sharps and have therefore, put in place control systems to reduce this risk as far as is reasonably practicable.

DO

- Report any blood, body fluid spills or sharps to the H&S Administrator or your Line Manager immediately, for clean up to be arranged.

DON'T

- Attempt to clean up such spills or sharps unless trained to do so.

3.12 New & Expectant Mothers (NEMs)

“New or expectant mother” or “NEM” is a term used to describe someone who is pregnant, who has given birth within the previous six months or who is breastfeeding. A specific risk assessment will be carried out for all women who fall into this category to ensure they are not exposed to anything that could damage either their health, that of the foetus or child. The assessment will be monitored and reviewed throughout the period of being a new or expectant mother.

DO

- Notify your Line Manager or the Chief Executive in writing of your becoming a new or expectant mother.
- Consult risk and COSHH assessments before commencing work activities.
- Speak to your Line Manager if you have any work related concerns during your pregnancy.

DON'T

- Undertake lifting activities or any other activities that could tire you when you are pregnant.

3.13 Stress

Pressure plays a part in most jobs however, the Health & Safety Executive (HSE) defines “stress” as an “adverse reaction people have to **excessive pressures** or other types of demands placed upon them”. Pressure can keep you motivated but, too much causes stress. Non-work factors can also contribute to stress levels. This may affect your ability to ‘bounce back’ and could leave you more vulnerable to work-related stress.

If you feel stress is affecting you, please speak to your Line Manager or a senior member of staff about it. They will be assuming that you can withstand the normal pressures of your job unless you let them know.

Free counselling and support is also available from Crisis Counselling. This can be arranged for you or you can contact them yourself on 0141 812 8474 or email them at info@crisiscounselling.co.uk

DO

- Be aware of stress becoming a problem and advise your Line Manager (if this would not be appropriate, another senior member) without delay if you think you are having an adverse reaction due to stress. Your situation will be handled in a confidential manner and with professional support if required.
- Inform your Line Manager where there are clear signs that a colleague(s) appears to be suffering from the effects of stress. Again, each situation will be dealt with in a confidential manner.

DON'T

- Ignore the typical symptoms of stress, which include: short temper; absences from work/illness; tiredness; loss of confidence/motivation; unusual mood swings; mistakes in work; errors in judgement; loss of concentration; anxiety; increased alcohol consumption.
- Worry – tell someone: a friend, a colleague, a manager or phone Crisis Counselling.

3.14 Young Persons

Young persons are less likely to identify and understand common workplace hazards, therefore, a specific young person's risk assessment is required to make sure they are told what to expect.

The Health & Safety description of a "Young Person" is any person under the age of 18. "Child" means a person who is not over school age. If you fall into either of these categories, the company will carry out a full risk assessment of your proposed job functions and ensure appropriate control measures will be put in place before you start work.

DO

- Familiarise yourself with the results of your young person's risk assessment before starting any work.
- Make sure all control measures are in place and being used.

DON'T

- Undertake any jobs that you have not been trained to do.

3.15 Electromagnetic Radiation

Yorkhill Housing Association has identified precautions for the main sources of radiation that you may be exposed to at work, including radiation from the sun, visual display units (VDU's, DSE, computer screens), mobile phones, and microwave ovens.

There is no scientific evidence that electromagnetic radiation from computer screens has an adverse effect on users, including pregnant employees however, existing skin conditions may be aggravated in conditions of low humidity. Similarly, there is no scientific evidence that limited use of mobile telephones is dangerous.

DO

- Wear sun screen and take breaks in the shade if you are required to work outdoors and report any skin problems to your Line Manager.
- Report cracked, broken or damaged computer screens or casings to the H&S Administrator.
- Minimise mobile phone use if possible, make short calls and use hands-free kits.
- Report any adverse health effects (e.g. headaches, fatigue) to the H&S Administrator or Line Manager, who can arrange for an independent medical examination.

DON'T

- Overexpose yourself to the sun.
- Have mobile phone telephone conversations that last over 20 minutes in duration.
- Carry mobile phones next to your body or in front pockets adjacent to genitals, instead use bags or outer pockets where practicable instead.
- Use a microwave oven if the door does not close properly; the oven casing is cracked or damaged in any way; or the interlock switch that turns off the oven when the door is opened does not function correctly.

3.16 Food Hygiene

Any food prepared by staff for consumption by other staff, tenants or the public should be wholesome and without risk to health. We will only provide food for employees or clients that is 'pre-packed' and purchased from reputable retailers. We will purchase such food immediately before use rather than storing at the premises.

We will keep facilities and equipment provided for staff use in a condition that minimises the risks for food safety by keeping fridges, sinks, worktops, tea/coffee making facilities clean and properly used.

DO

- Ensure all food items brought onto our premises are sealed and stored in suitable containers and at suitable temperatures.
- Put your name on your food items stored in the fridge or cupboards.

DON'T

- Keep old or out of date food in the fridge or cupboards.

3.17 Occupational Health

The HSE estimates that within the UK in 2017/18, 1.4 million people who worked during the last year suffered from an illness they believed was caused or made worse by their work. Yorkhill Housing Association aims to prevent ill health caused by work and to promote good health. We are able to make use of occupational health consultants and specialists to carry out tasks and advise us in such areas when required.

DO

- Contact the H&S Administrator or your Line Manager should you feel you could benefit from the services of an occupational health service, such as: medical examination; health surveillance, monitoring areas or individuals; sampling of air, dust, noise, vibration, etc.

DON'T

- Fail to inform us if you suspect you may be suffering from a work related illness.

3.18 Homeworking

If you are permitted to work from home, the risks associated with homeworking must be adequately controlled. Permission must first be granted from your Line Manager or the Chief Executive and you must attend a suitable H&S Awareness training course before commencing homeworking.

DO

- Make sure you read HSE guidance note INDG226 and the EVH Guidance on Homeworking.
- Take all reasonable precautions to ensure your safety and that of any others who may be affected by your work.
- Contact the office upon starting work and again at the end of your working shift.

DON'T

- Hold meetings within your home, unless you have specific agreement from your Line Manager.
- Take home any equipment that has not been subject to a suitable and valid inspection and test regime, e.g. portable appliance testing.

3.19 Loneworking

Procedures are in place to protect your safety when lone-working or working out with normal working hours. Training is essential for lone workers as they have to deal with situations on their own without support or reasonable access to colleagues.

DO

- Contact your Line Manager by call/text when you are finished working by agreement out with normal working hours or when lone-working and are no longer on 'work time', e.g. upon leaving the office, or a tenants' home.
- In the event of an emergency, contact the emergency service(s) and your Line Manager should an incident occur whilst you are working alone, who will deal with the situation as appropriate.
- Familiarise yourself with the Lone-working Policy and Procedures.

DON'T

- Enter work premises outside of normal working hours or carry out any work away from the work premises without the knowledge and consent of your Line Manager.

3.20 Adverse Weather

“Adverse weather” means any extreme weather conditions which includes:- snow, ice, wind, flood, excessive heat, thunder and lightning etc. We will monitor weather warnings and circulate any relevant information from the Met Office, local authorities and police to all employees.

DO

- Follow any advice and instructions issued by the organisation to protect your health, safety and wellbeing.
- Speak to your Line Manager during an “Amber” or “Yellow” weather warning if you are concerned about travelling to and from your place of work.
- Plan ahead – ensure you have sufficient supplies in your home and vehicle in case of being unable to travel.

DON'T

- Put yourself or others at unnecessary risk.
- Drive during a red weather warning, except in an emergency.

Section 4 – Work Carried Out By Employees

4.1 Manual Handling

Manual Handling covers a number of activities, such as lifting, lowering, carrying, pushing and pulling using bodily force. Incorrect manual handling techniques are a major cause of lower back pain, joint injuries and repetitive strain injuries. These injuries are the single most common cause of workplace injury. As a result, risk assessments are required to identify tasks that may cause physical injury. Where required, you will be trained in the hazards and risks associated with manual handling, general ergonomics awareness and the safe handling and lifting techniques.

DO

- Ensure that goods being delivered are placed as close to the point of use/storage as possible by the delivery personnel to reduce the amount of manual handling required by yourself/colleagues.
- Report any unusual manual handling tasks to your Line Manager to allow a specific risk assessment to be carried out.

DON'T

- Carry a large load on your own that obscures your vision, even if it is light in weight.
- Direct or carry out a lifting operation involving hoists, pulleys or cranes if you have not been trained in their use.
- Bend or stretch whilst attempting to lift.
- Attempt any sudden or awkward jerking or tugging actions.
- Twist the body whilst lifting any load.
- Attempt to lift an item which is out with your own lifting ability.

4.2 Working at Height

Falls from height are the most common cause of fatal injury and the cause of major injuries at work. Over the last five years, on average 81 workers have died and approximately 3,700 workers suffered major injuries each year due to falls from height at work.

For the majority of employees, working at height, use of ladders, scaffolding, in lofts and roof work is not part of their job. However, if you are required to work at height, appropriate training and copies of control procedures that must be adopted from the Control Manual whilst working at height. A risk assessment and preparation of safe working procedures will be required prior to any work being done at height.

When using step ladders or stools:

DO

- Ensure stepladders are checked/inspected regularly.
- Check before use that the stiles, treads and back support are free from damage/cracks and that hinges, cords and restraining stays are in good order.
- Pay attention to where and how you place your feet when dismounting.
- Open step ladders fully every time.

DON'T

- Use step ladders or work at height if you have not been trained.
- Overstretch when you are on a stool or set of step ladders.
- Leave tools on the top platform.
- Go above the maximum recommended step marked

4.3 Personal Protective Equipment (PPE)

Personal Protective Equipment (PPE) includes a range of clothing and protective devices to protect the wearer from certain hazards. It is only a protection if it is fitted and used properly.

PPE includes such items as hard hats, respirators, safety boots, protective gloves, weatherproof clothing, coveralls, etc.

DO

- Familiarise yourself with the Risk Assessment for the task you are undertaking, and where PPE is identified as a control measure, remember its use is mandatory.
- Ensure you have received training and, if appropriate, fitting for required PPE.
- Use PPE provided to you.
- Take responsibility for keeping your own PPE clean, in good condition and properly stored.
- Report any PPE defects to the H&S Administrator or your Line Manager immediately.

DON'T

- Misuse or modify any PPE
- Use any PPE that has not been issued to you
- Use PPE that is damaged.
- Assume that PPE is fit for the task – consult the COSHH/Risk Assessment or ask for advice.
- Perform a task or duty without PPE if you feel it is necessary to ensure your health, safety and wellbeing.

4.4 Asbestos

We have an asbestos management register that includes information on the presence and condition of asbestos containing materials within the office and our properties. Procedures are also in place for dealing with asbestos related incidents and to ensure that any work carried out on the fabric of the buildings takes account of the possibility that asbestos may be present.

DO

- Familiarise yourself with our asbestos management register and procedures prior to commencing any work that disturbs the fabric of any of our buildings or premises.
- Report any suspect material immediately to your Line Manager to allow an accredited external consultant to be contacted to carry out identification.

DON'T

- Handle or remove any materials thought to contain asbestos.
- Allow any work to be carried out on the fabric of the building unless it is known that the material is asbestos free.

Section 5 – Work Carried Out By External Contractors

5.1 Selection and Use of Contractors

Procedures are in place to ensure that only qualified and experienced contractors with proven safety records are appointed to carry out work for Yorkhill H.A.

DO

- Familiarise yourself with the company's procedures for appointing contractors if you have responsibility for doing this.
- Report any contractor working unsafely to a senior member of staff immediately.

DON'T

- Appoint any contractor who are not on the organisation's 'Approved List of Contractors' to carry out work for the organisation.
